

Plasterless installation with KLEMMFIX®

Signal cover

- reusable
- protects interior of box, screwing dome and screw heads when plastering

Order number:	1181-60
EAN:	4013456430600
For installation opening	60 mm
For one-gang boxes and one-gang junction boxes 60 mm Ø	Yes
Packaging inner/dispatch	50/1000

The KLEMMFIX® system saves up to 50% of the installation time when compared with the traditional installation of flush-mounting boxes using plaster. The KLEMMFIX® system ensures that the box is securely fixed and kept in position in the wall before the wall is plastered. No need for plaster, quick cement or similar products. No need to clean tools. No risk to health caused by chemicals. No need to think about storage problems such as frost, heat, shelf life etc.

- For fitting boxes without plaster
- For all standard types of stone such as lime sand brick, cellular concrete, lightweight concrete, vertically perforated brick with and without filling
- Efficient, clean and time-saving
- Alignment and secure mounting even before plastering
- Can also be used in sub-zero temperatures
- Plastering the wall and the penetration of plaster into the ring gap around the box ensures that the box is finally and permanently fixed in position
- Nicht bei Verwendung von Lehm- oder Dünnputz einsetzbar
