EFFICIENT AND PROVEN  
LIGHT QUALITY

## NEW LED LAMPS

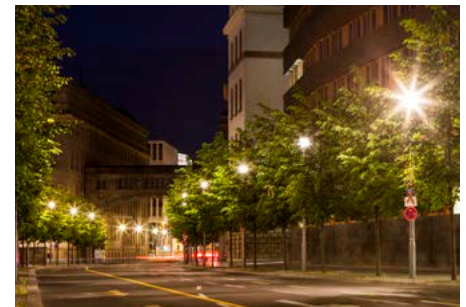

ADVERTORIAL

Lighting specialist LEDVANCE has consistently expanded its LED lamp portfolio. The 2025/2026 range now includes numerous optimised products and also new products with real added value.

## LED UPGRADE MADE EASY

The LED EXTERNAL SYSTEM is now also available for CFLni lamps with 2G11 bases. When switching to LED, only the driver and lamp need to be replaced – the luminaire can be retained. Perfect for applications without the option of replacing lamps or where dimming is required. It's also DALI-2 compatible and, thanks to replaceable components, sustainable and economical.

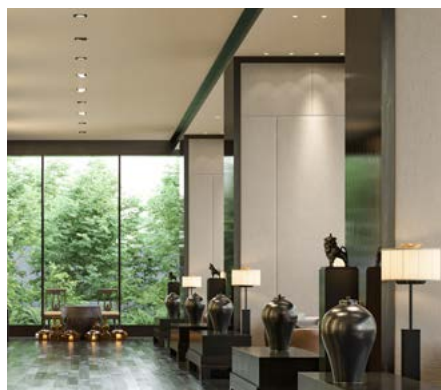

## STREET LIGHTING 2.0

The new NAV and HQL FILAMENT PERFORMANCE are ideal replacements for conventional NAV and HQL lamps. Virtually identical in design, they come with a 360° beam angle, ENEC certification and high efficiency, making them the perfect choice for luminaires with reflectors.

## THE NEW 2-IN-1 TUBE

LEDVANCE is the first supplier on the market to present this completely new product: the LED TUBE T8 EM with MULTI LUMEN. There's a choice of two luminous flux levels before installation which means greater flexibility, lower storage costs and simpler planning. Other highlights include a longer lifetime and a guarantee of up to seven years.

## SMALL BUT EFFICIENT

LED SLIM LINE R7S and GLOW DIM PIN dimmable lamps combine atmospheric light with high efficiency. The lamps fit into almost all existing luminaires thanks to their similar dimensions to conventional lamps.

## ECOLOGICAL USE OF RESOURCES

LEDVANCE puts sustainability first in its new lamp portfolio, offering an extended selection of LED ENERGY CLASS A lamps and resource-saving NATURELOOP lamps which are made of at least 50 % recycled PCR plastic.
